EDUCATION

Odisha University of Technology and Research

Bachelor of Technology in Information Technology, CGPA: 9.18 / 10

Sep 2023 – Jun 2027

Bhubaneswar, Odisha, India

TECHNICAL SKILLS

Languages: C, C++, JavaScript, TypeScript, Python

Core CS: Data Structures, Algorithms, Complexity Analysis

Backend & Distributed Systems: Node.js, Express.js, Socket.IO, WebRTC, BullMQ (distributed job queues)

Frontend: React.js, Next.js, SvelteKit, React Native, Tailwind CSS

Databases: SQL, PostgreSQL, MongoDB, Redis, Prisma

Cloud & Tools: AWS, Azure, Docker, Git, GitHub, Linux, Postman

EXPERIENCE

Full Stack Developer Intern

Feb 2026 – Sep 2026

Orbits Plus

Cardiff, UK (Remote)

- Designed scalable component architectures and state-management solutions across 20+ reusable components, manually validating edge cases and cross-browser/device behavior before release, reducing UI defects by 20% and improving development velocity.
- Architected high-performance interfaces in SvelteKit, cutting bundle size by 25% and improving page-load speed by 15% through compile-time optimization.
- Integrated frontend applications with 15+ backend APIs, reducing response latency by 30% and improving real-time data synchronization across distributed user workflows.

Full Stack Developer Intern

Oct 2025 – Dec 2025

GoMind AI LLC

Austin, Texas (Remote)

- Optimized backend services with NestJS and PostgreSQL, improving API performance and cutting average response times by 35%.
- Translated evolving product requirements from founder feedback into a Gmail-integrated reminder system, building a pipeline using the Gmail API (paginated retrieval) and OpenAI's API for importance classification to auto-surface meetings and reminders in-app; shipped to production on the Play Store.
- Led frontend development in React Native, delivering 10+ production features across MVP and post-MVP releases.

PROJECTS

NawaNapam | *Next.js, TypeScript, Node.js, Socket.IO, WebRTC, Redis, PostgreSQL, Prisma* | Live | GitHub

- Launched a real-time, one-to-one communication platform serving 5,000+ registered users using Next.js, TypeScript, Node.js, WebRTC, and Socket.IO.
- Designed a Redis-based matchmaking engine with Lua scripting, heartbeat tracking, and session persistence for low-latency user pairing; diagnosed and resolved RBAC permission-check latency via optimized PostgreSQL joins and indexing as the user base scaled.
- Proposed and built an XP-based engagement system rewarding daily login streaks and call participation, with XP directly influencing matchmaking priority within users' gender preference to drive platform retention.

Zan | *TypeScript, Node.js, Express.js, Redis, BullMQ, Electron, Websocket, Azure* | Live | GitHub

- Built a distributed job-scheduling backend using Node.js, Redis, and BullMQ for task orchestration, heartbeat monitoring, and execution tracking.
- Integrated Azure Blob Storage and secure job execution flows for a decentralized compute marketplace.
- Developed an Electron desktop app for machine onboarding, hardware detection, and real-time WebSocket communication.

ACHIEVEMENTS

- Top **11% globally** on LeetCode (Rating: 1717) — strong data structures, algorithms, and complexity-analysis fundamentals.
- CodeChef Global Rank **606/30,523** (Starters 175).
- Top **200/3,000** participants at HackNITR (NIT Rourkela).
- Active open-source contributor, Hacktoberfest 2024 and 2025.
